Professional Summary

Software Engineer with 2.5+ years of experience building and operating Python services, REST API integrations, connectors, and automation for enterprise data exchange and data pipelines. Strong working SQL (Snowflake, dbt, MySQL), source control, CI/CD, code review, and secure coding (OAuth 2.0, JWT, RBAC). Experienced in production support, root-cause analysis, and replacing manual operational steps with code, including a 30% reduction in Snowflake query time and a 40% reduction in reporting turnaround. Interested in data platforms and how data moves between systems; use AI tools and LLM APIs practically, with judgement on validating their output.

Professional Experience

Jade Global Software Pvt. Ltd. Pune, India
Associate Software Developer *Aug 2025 – Present*

- Build, test, and operate Python services, REST API integrations, and automation for secure enterprise data exchange between business applications and downstream systems for a US-based retail client, supporting production systems processing thousands of daily transactions.
- Develop REST API connectors using OAuth 2.0 and Extract APIs to exchange data with external platforms and automate downstream financial reporting workflows.
- Replaced manual reporting steps with Python and SQL workflows for data extraction, transformation, validation, reconciliation, and scheduled delivery, reducing monthly reporting turnaround time by **40%**.
- Optimize Snowflake SQL queries and dbt models for data pipelines, reducing query execution time by **30%**.
- Manage Azure DevOps CI/CD pipelines, Git branching, pull request code reviews, and deployment automation, contributing to a **35% reduction in deployment failures** through improved release processes.
- Join production support: investigate application and integration failures, perform L2/L3 troubleshooting and root-cause analysis, fix defects, monitor workflows, and validate data consistency across systems.
- Collaborate with development and business teams to break down work, provide input on design, feasibility, and risk, and document solutions.
- Build and maintain SFTP-based file exchange workflows to securely receive and deliver data files between the client's systems and external partners, including file validation and failure handling.
- Write automated tests for Python integration and data-validation logic to catch defects before release and improve deployment reliability.

Jade Global Software Pvt. Ltd. Pune, India
Software Developer Intern *Aug 2024 – Jul 2025*

- Designed modular Python REST APIs with JWT authentication and role-based access control (RBAC) for secure backend operations.
- Developed an Inventory Management System using React.js, Python Flask, and MySQL with inventory tracking and approval workflows for Admin, Manager, and User roles.
- Assisted with SAP Expense REST API integrations, Python and SQL data validation, and troubleshooting of enterprise integration issues.
- Supported configuration, issue analysis, and deployment activities, working with the development team to resolve defects and support delivery.

Projects

Enterprise Data Integration and Workflow Automation Platform
Python, SQL, Snowflake, dbt, Azure Logic Apps, REST APIs *Aug 2025 – Present*

- Develop and support data integration and pipeline orchestration workflows connecting business applications and downstream systems for a US-based retail enterprise.
- Build Snowflake SQL transformations, dbt models, and Python data processing for extraction, transformation, validation, and delivery.
- Support workflows using Azure Logic Apps, Azure DevOps CI/CD, REST APIs, and SFTP file exchange with external partners, backed by automated tests.
- Investigate production failures, perform root-cause analysis, and validate data consistency across connected systems.
- Contribute to deployment processes, authentication improvements, and operational reliability with cross-functional teams.

End-to-End Inventory Management System
React.js, FastAPI, Python, MySQL, Tailwind CSS *Mar 2025 – Apr 2025*

- Developed a full-stack inventory application with role-based access for administrators and staff.
- Built RESTful APIs using FastAPI and Python with JWT authentication and RBAC.
- Built a responsive React.js frontend (Vite, Tailwind CSS, React Data Grid) with filterable tables, stock transfers, and ApexCharts dashboards backed by MySQL.

JobAutoPilot – AI-Powered Job Application Automation Platform

React.js, Node.js, Express.js, SQLite, REST APIs, LLM APIs *Personal Project*

- Designed a full-stack automation platform (React.js, Node.js/Express.js) to organize job listings, applications, and outreach status.
- Integrated Apify scraping workflows and LLM APIs for job-profile matching and tailored message generation, with SQLite storage and Nodemailer outreach.

TECHNICAL SKILLS

Languages: Python, SQL, Java, TypeScript, JavaScript, Bash
Backend and APIs: REST APIs, API connectors, FastAPI, Flask, Node.js, Express.js, JSON, XML, SFTP, partner data exchange, OAuth 2.0, JWT, RBAC, Postman, webhooks
Data Platforms: Snowflake, dbt, SQL query optimization, ETL, data pipelines, data ingestion, data validation, MySQL, PostgreSQL, MongoDB, SQLite
Cloud and DevOps: AWS Lambda, Azure DevOps, Azure Logic Apps, GitHub Actions, CI/CD, Docker, Git, deployment automation
Engineering Practices: Automated testing, source control, code review, secure coding, documentation, production support (L2/L3), root-cause analysis, incident investigation
AI Tools and Automation: LLM integration (OpenAI, Gemini), LangChain, LangGraph, RAG, prompt engineering, workflow automation
Frontend: React.js, HTML5, CSS3, Tailwind CSS, Vite
Systems: Linux, shell scripting, networking fundamentals

EDUCATION

G H Raisoni College of Engineering & Management Pune, India
B.Tech in Computer Engineering – Honors in Data Science; CGPA: 9.04/10 *2021 – 2025*

ACHIEVEMENTS

Jade Steadfast Award (Q4 FY26): Recognized for delivery quality, ownership, and client impact.
Smart India Hackathon Finalist (Oct 2023): Shortlisted from 10,000+ teams nationally.
